Skills

Programming Tools

Golang / Python / Java /
Typescript / SQL

Frameworks

Gin / Django / Spring Boot /
React / Next.js

Tools & Technology

Git / Linux / Docker / K8S /
MySQL / Redis / MongoDB

About Me

I'm Yongjin Huang, a software developer with a passion for coding and technology. In my free time, you can find me listening to hip-hop music, watching entertainment videos, playing video games, and of course, coding.

Education

Sun Yat-sen University

Software engineering

Aug 2013 - June 2017

Experience

Wilddata

Apr 2024 - Present

Software Developer

Java / Spring Boot, Typescript / Next.js

- Designed and maintained CI/CD pipelines using [Tencent Cloud](#) and [Coding](#), improving deployment efficiency by 100%
- Developed and integrated backend features for the [Suppr](#) project, including WeChat official account integration, points management, literature search, literature summarization, document translation, and payment processing, enhancing system functionality and user experience
- Maintained backend projects by handling HTTPS certificates, configuring NGINX, and managing websites. Built a containerized deployment service for applications, improving scalability and efficiency.
- Developed the Wilddata Payment Module, streamlining payment integration for new applications and reducing onboarding time by 200%

Tarro

Apr 2023 - Apr 2024

Software Developer

Golang / Gin, Typescript / React

- Defined and implemented RESTful APIs for POS ordering, enabling seamless integration with frontend systems.
- Developed and optimized printing logic for POS receipts, making it more customizable, reducing print errors by 50% and improving efficiency.
- Migrated legacy menu data to a new POS system, ensuring seamless transition and reducing retrieval time by 30%

Shopee

Aug 2019 - Mar 2023

Senior Software Developer

Python / Django, Golang / Gin, Typescript / React

- Designed and implemented scalable technical solutions of the billing platform, improving system efficiency and maintainability.
- Led project execution, managed risks, and ensured on-time delivery by optimizing resource allocation.
- Led weekly code review sessions, improving code quality and reducing deployment defects by 30%.
- Optimized billing API performance, reducing DB connections from 4k to 1k and increasing QPS from 2k to 5k.
- Delivered 5 technical presentations on software architecture and performance optimization.

Huawei

Jul 2017 - Aug 2019

Software Developer

Java / Spring Boot

- Designed, developed, and launched CodeHubEdge middleware, enabling third-party service integration.
- Wrote, optimized, and maintained repository operation code, improving the efficiency of operations (Create repositories, submit a commit, etc) by 30%.
- Read GitLab source code and blogs during the job and output a series of GitLab-related blog posts.
