Yongjin Huang

Software Engineer

I'm Yongjin Huang, a software engineer with a passion for coding and technology. In my free time, you can find me listening to hip-hop music, watching entertainment videos, playing video games, and of course, coding.

Education: Sun Yat-sen University (985)
Software Engineering - Bachelor
(Aug 2013 - June 2017)

Email: keep_straight_up@foxmail.com
Phone: +86 18826234610
Wechat: CallMeYoungGene
Address: Shanghai, China

9+ Years Exp. | **5** Companies | **5+** Tech Talks

Work Experience

My Journey

Oct 2026 - Present `Current`

Cognizant (Supporting Apple)

Full-Stack AI & Platform Engineer

`Python / FastAPI` `AI Agents / LLM` `LangChain` `TypeScript / React` `PostgreSQL` `Redis` `AWS S3` `OpenTelemetry` `K8s`

- Architected **Fuyao**, the unified AI data plane and LLM gateway for Apple's **Kunpeng** multi-agent supply chain platform, powering **Responses API LLM inference** with real-time **SSE token streaming**, **LangChain / LangGraph** (`FuyaoChatModel`) integration, and isolated agent workspaces
- Built a **human-in-the-loop Studio AI Agent Copilot** with live registry context injection, structured tool-action synthesis, and Pydantic/SQL DDL guardrails for natural-language governance of resources, auth configs, and RBAC policies
- Engineered end-to-end **AI Agent & SDK observability** with **OpenTelemetry** trace propagation and CloudWatch EMF sinks, tracking per-agent LLM/DB/S3 latency, actor attribution, and external agent egress traffic
- Led the **4-phase React + TanStack Query** migration of Fuyao Studio Console and implemented **S3 object versioning** and cursor pagination across `apple-fuyao-sdk` and FastAPI microservices to support high-volume agent artifacts

April 2024 - April 2026

WildData

Software Engineer (Technical Partner)

`Java 21 / Spring Boot 3` `MySQL` `MongoDB` `Redis` `Kafka` `K8s`

- Built **Suppr**, an AI-powered research platform deployed on K8s with independently scalable API and worker services
- Developed AI services for literature search, file translation, and research report generation with Kafka async processing and SSE streaming
- Designed payment and point workflows with freeze/consume/rollback logic and idempotent WeChat Pay / Alipay callbacks
- Managed Tencent Cloud infrastructure and CI/CD with TKE, EdgeOne, Jenkins, Docker, Helm, and Orbit CD

Apr 2023 - Apr 2024

Tarro

Software Engineer

`Golang / Gin` `TypeScript / React`

- Built RESTful APIs for POS ordering with seamless frontend integration
- Optimized POS receipt printing logic, reducing errors by **50%**
- Migrated legacy menu data to new POS system, reducing retrieval time by **30%**

Aug 2019 - Mar 2023

Shopee

Senior Software Engineer

`Python / Django` `Golang / Gin` `TypeScript / React`

- Designed scalable billing platform solutions, improving efficiency and maintainability
- Led project execution with risk management and resource optimization
- Led weekly code reviews, reducing deployment defects by **30%**
- Optimized billing API: reduced DB connections from **4k to 1k**, increased **QPS from 2k to 5k**
- Delivered **5** tech talks on architecture and performance optimization

Jul 2017 - Aug 2019

Huawei

Software Engineer

`Java / Spring Boot`

- Built and launched CodeHubEdge middleware for third-party service integration
- Optimized repository operations (create, commit, etc.), improving efficiency by **30%**
- Studied GitLab source code and published **technical blog posts**

Skills

My Expertise

Programming Languages: `Golang` `Python` `TypeScript` `Java` `SQL`

AI & Frameworks: `AI Agents` `LLM / RAG` `LangChain` `FastAPI` `Spring Boot` `Gin` `Django` `React` `Next.js`

Tools & Technologies: `Git` `Linux` `Docker` `K8s` `PostgreSQL` `MySQL` `Redis` `MongoDB` `Kafka` `Helm` `OpenTelemetry`
